

VALIDATION

After reviewing the product with our user base, we found out that registered users were allowed to comment in subforums without being subscribed to that particular subforum. So here is our newly added specification of the commenting system.

System feature Commenting :::REQ12

3.12.1 Description and priority

Users can post comments in discussion, adding to the debate on the topic

Priority=High

3.12.2 Stimulus/Response sequences

Preconditions: User must be signed-in and subscribed to the subforum where the discussion has been posted

User opens the discussion thread and can fill the comment box and press 'Post comment'

Postconditions: If the post has enough words in it, he can now downvote the original discussion post. Other users can vote his comment and add or remove weight from his vote to the original post.

Other than that the reviewers were satisfied with the functionality that the application has to offer.
